Software Engineering Group Projects - First Iteration Checkpoint

Due Date: Fri 20th October 2017 (7pm)

We are running these projects with **four 2-week iterations**. At the end of each iteration you should meet with your supervisor and give them a demonstration of your software. You should be able to show that you have made progress, and that your software has more (or better) features than it did at the last demo.

Print out this form, take it with you when you demonstrate to your supervisor, and ask them to complete and sign it. Then **scan the signed sheet and submit it to Cate** by the deadline. You should also submit a set of screenshots showing the current state of your version control repository, your CI build, and your project plan.

Group Number:

Group Members:

Supervisor name:

I certify that in this iteration I feel the group has... (check one)

* not been able to demonstrate any new working software
* shown me something working, but a bit less than I had hoped for, or not what we agreed
✓ * adequately delivered the features that we agreed on
* made better progress than I expected
* made amazing progress with wonderful results

Has the list of risks to project success changed since you last met the group? Yes / ~~No~~

Some risks mitigated wrt technologies. (Accuracy requirements seem higher than initially expected).

For the next checkpoint, the two main features we have agreed on to be delivered are:

* End to end test pipeline with scoring metrics
* Basic Android app providing cloud-based deblurring.
